Information about myself

I have been programming since the Amiga days. More recently, I have created a series of programming videos to teach core concepts such as Object Oriented Programming (OOP) – this is taught using Python for future proofing applications because of its vast versatility in the marketplace and little dependence on developers changing programming libraries ... videos on YouTube. <https://www.youtube.com/channel/UC9lZmtiofWELTH9zk8GHxHQ>

After graduating in Applied Computer Science, I got a paid internship as a blockchain developer. Within the remote role I created a website using the Solidity language for the backend with NodeJS and NextJS with JavaScript and ReactJS as the frontend. The website can convert your artwork into an NFT using the ERC721 standard smart-contract and connecting to a web3 platform such as Metamask. I problem-solved how to create, list, and sell NFTs for people – the team bounced ideas however had no developers.
